

PARAJUMBLES (Difficulty Level - High)

Prof. Tommy Cherian
8547006780

1. Rearrange in a logical sequence

(P) Yet, the very act of defining this "consciousness" in a silicon-based entity remains a significant hurdle, steeped in unresolved philosophical dilemmas about qualia and self-awareness. (Q) The concept of technological singularity—the hypothetical point at which artificial intelligence surpasses human intellectual capacity—is often framed as an inevitable march of progress. (R) It is this potential rupture in the evolutionary narrative that drives much of the anxiety and excitement surrounding future AI development. (S) This event is predicted to trigger runaway technological growth, fundamentally altering human civilisation in a way that is currently unpredictable by human means.

- A. Q P S R
- B. S Q R P
- C. Q S R P
- D. P R S Q

C. Q S R P

D. P R S Q

1. Rearrange in a logical sequence

(P) Yet, the very act of defining this "consciousness" in a silicon-based entity remains a significant hurdle, steeped in unresolved philosophical dilemmas about qualia and self-awareness. (Q) The concept of technological singularity—the hypothetical point at which artificial intelligence surpasses human intellectual capacity—is often framed as an inevitable march of progress. (R) It is this potential rupture in the evolutionary narrative that drives much of the anxiety and excitement surrounding future AI development. (S) This event is predicted to trigger runaway technological growth, fundamentally altering human civilisation in a way that is currently unpredictable by human means.

A. Q P S R

B. S Q R P

C. Q S R P

D. P R S Q

Q introduces the main concept (Singularity). **S** elaborates on the consequence of the event mentioned in Q. **R** connects the event/consequence (S) to the emotional response (anxiety/excitement). **P** introduces a key philosophical counterpoint/dilemma (consciousness/qualia) that directly challenges the underlying assumptions of R.

2. Rearrange in a logical sequence

(P) This decline is primarily driven by industrial monoculture farming, over-tillage, and the excessive use of nitrogenous fertilisers that disrupt the natural soil biome. (Q) Despite its criticality, current global agricultural practices are leading to topsoil degradation at a rate vastly exceeding its natural regeneration capacity. (R) The planet's topsoil, a thin layer of nutrient-rich earth, is the ultimate non-renewable resource underpinning 95% of all human food production. (S) Consequently, the security of our food chains in the next fifty years is increasingly dependent on adopting sustainable, regenerative farming techniques immediately.

- A. R S P Q
- B. Q P S R
- C. R Q P S
- D. P Q R S

- A. R S P Q
- B. Q P S R
- C. R Q P S**
- D. P Q R S

R introduces the subject (Topsoil) and its critical importance. **Q** immediately introduces the problem/conflict regarding the subject (degradation rate). **P** provides the specific causes/mechanisms of the degradation mentioned in Q. **S** is the clear conclusion, offering the ultimate solution/consequence of the problem detailed in P and Q.

3. Rearrange in a logical sequence

(P) As a result, the primary commercial effort of major tech platforms is dedicated to designing interfaces that maximise user engagement time, often at the expense of user well-being. (Q) The modern digital economy operates increasingly not on the scarcity of goods, but on the scarcity of a specific, finite human resource: attention. (R) This transformation elevates every click and scroll into a valuable, monetizable data point, feeding the cycle of targeted advertising. (S) When this resource is treated as the key commodity, competition among platforms naturally intensifies to secure the largest share of individual focus.

- A. Q P S R
- B. Q S R P
- C. S R P Q
- D. R Q P S

(P) As a result, the primary commercial effort of major tech platforms is dedicated to designing interfaces that maximise user engagement time, often at the expense of user well-being. (Q) The modern digital economy operates increasingly not on the scarcity of goods, but on the scarcity of a specific, finite human resource: attention. (R) This transformation elevates every click and scroll into a valuable, monetizable data point, feeding the cycle of targeted advertising. (S) When this resource is treated as the key commodity, competition among platforms naturally intensifies to secure the largest share of individual focus.

A. Q P S R

B. Q S R P

C. S R P Q

D. R Q P S

Q introduces the core subject and thesis (Attention as a scarce resource/commodity). **S** elaborates on the consequence of the premise in Q (competition intensifies). **R** connects the competition (S) to the monetisation mechanism (data point/targeted advertising). **P** uses "As a result" to logically conclude the passage by explaining the current commercial effort (maximising engagement) which flows from R.

4. Rearrange in a logical sequence

(P) This school of thought, often called Presentism, holds that only the instantaneous 'now' is fundamentally real, and that the past and future are merely conceptual constructs. (Q) The philosophy of time is primarily divided into two major metaphysical camps concerning the reality of past and future moments. (R) Conversely, the Eternalist view posits that all points in time—past, present, and future—are equally real, existing like spatial dimensions. (S) The first camp holds that temporal reality is akin to a flowing river, where only the leading edge of the present actually exists in a substantial sense.

5. Rearrange in a logical sequence

(P) This contrasts sharply with traditional economic models, which assume all actors are perfectly rational and consistently maximise utility. (Q) Conversely, the application of cognitive psychology reveals that human decision-making is rife with systematic biases, such as anchoring and loss aversion. (R) Behavioural finance emerged as a scholarly field to explore the ways in which psychological factors influence the financial decisions of individuals and markets. (S) Understanding these predictable deviations from rationality is crucial for explaining phenomena like market bubbles and crashes, which standard models fail to account for.

- A. S P Q R
- B. Q P R S
- C. P Q S R
- D. R Q P S
